## SUMMARY

Results-oriented Software Engineer with 4+ years of experience designing and scaling distributed backend systems, microservices, and automated data pipelines. Proficient in Java (Spring Boot) and Python ecosystems, with a proven track record in optimizing database throughput, implementing asynchronous messaging architectures, and containerized deployments.

## EXPERIENCE

**Mobileaction | Software Developer**
*December 2024 - October 2025 | Ankara, Turkey (Hybrid)*
• Maintained and enhanced 30+ distributed Spring Boot microservices handling core business logic, analytics, and partner integrations.
• Designed and implemented RESTful APIs using Spring Data JPA, Hibernate, and PostgreSQL/MySQL, optimizing complex queries for high throughput.
• Decoupled synchronous bottlenecks into resilient asynchronous workflows utilizing RabbitMQ, significantly stabilizing system latency under heavy traffic.
• Built comprehensive automated unit and integration tests using Mockito and JUnit, collaborating closely with QA to streamline CI/CD delivery pipelines.
• Managed cloud storage and deployment assets across AWS (S3, ECS) and Google Cloud Storage.

**Rollee | Software Developer**
*January 2022 - March 2024 | Remote*
• Reverse-engineered web and mobile application authentication flows (OAuth, session tokens) for platforms like Uber, Amazon, and Upwork to ensure persistent data ingestion.
• Architected automated, scalable data extraction services in Python (FastAPI, Httpx), handling high-frequency daily synchronization routines.
• Managed relational schemas and data consistency across PostgreSQL, implementing caching strategies to accelerate read-heavy queries.
• Deployed and orchestrated containerized scraper services using Docker and AWS, ensuring high availability and robust error recovery.

**AppNava | Junior Software Developer**
*February 2021 - November 2021 | Ankara, Turkey*
• Developed full-stack web applications and internal tools using Django, Python, and React, taking full ownership of features from design to deployment.
• Built data engineering pipelines to ingest, transform, and store analytical data into Google BigQuery.
• Wrote automated test scripts and participated in code reviews, establishing core engineering standards within a fast-paced development team.

## EDUCATION

**Yildiz Technical University**
*Bachelor of Science in Computer Engineering (2021) | Istanbul, Turkey*

## TECHNICAL SKILLS

• Languages: Java (Java 17/21), Python, SQL, JavaScript, C#
• Frameworks: Spring Boot, Spring Data JPA/Hibernate, Spring Security, FastAPI, Django
• Testing & Practices: Mockito, JUnit, Test-Driven Development (TDD), REST APIs, Microservices, Agile
• Databases & Messaging: PostgreSQL, MySQL, Redis, RabbitMQ, Google BigQuery
• Cloud & DevOps: AWS (ECS, EC2, S3, Lambda), Docker, Kubernetes, CI/CD, Git, Maven, Gradle
• Methodologies: Reverse Engineering, Web Scraping, Session Management

## LANGUAGES

• Turkish: Native | English: Professional Working Proficiency (B2/C1)
